

TYPICAL

GN2000 SERIES

HIGH SPEED OVERLOCK SEWING MACHINE
INSTRUCTION BOOK/PARTS CATALOGUE

INTRODUCTION

Thank you very much for purchasing 2000 Series sewing machine.

This instruction manual describes daily routine maintenance and safety precautions to keep the machine in the best possible conditions.

Please study this manual very carefully before operating the machine.

OBSERVE THESE SAFETY PRECAUTIONS

Though 2000 series takes the utmost care to produce safe sewing machines and devices, operators should follow these basic safety rules.

- To prevent accidents, do not remove safety devices or parts while operating the machine.
- Do not leave tools or other unnecessary objects on the machine table while operating the machine.
- Before maintenance, adjusting, cleaning, threading or replacing the needle, and to prevent accidents, be sure the power is turned off. Check that the machine will not operate when the pedal is pressed.

Note

In case a clutch type motor is used, it will keep on rotating by inertia after turning off power supply ①. If the machine pedal ② is stepped on inadvertently, it is dangerous because the machine will move unexpectedly. Keep on stepping on the machine pedal ② until the machine comes to a stop after turning off the power supply ①.

- Turn the power off before leaving the machine table.
- In the event of a power failure, be sure to turn the machine off.
- Check that the machine is securely grounded.

Standard needle	13

Schematic diagram of the machine table

Cut the table referring to the diagram .

BEFORE OPERATING

Instaling the machine head

1. Mount the machine head on the mahcine rest board.
2. Adjust the tension of the belt so that it can be about 2cm bent inward when you press the middle of it.
Adjust the height of the motor to do this.
3. Install the belt cover referring to the Figure.

BEFORE OPERATING

The machine speed and turning direction

The machine rotates clockwise when seen from the machine pully side.

Make sure your machine type and run it not exceeding the maximum speed as listed in the table.

Modle	(r. p. m) Sewing speed (max)
2000 -3 2000 -3B 2000 -3E	7000
2000 -4 2000 -4M	6500
2000 -4H	6000
2000 -5L 2000 -5 2000 -5(5 × 5)	6500
2000 -5H	5500

After filling the oil pan, the top of oil indicator should lie between (H) and (L) lines.

Add oil, when it reaches or goes below (L).

Note: Use our company recommended oil.

Apply 2 or 3 drops of oil by hand when the machine is used for the first time or has been left unused for some time.

Note: Use our company recommended oil.

BEFORE OPERATING

Filling the HR device with silicon oil

Fill the HR device with oil before it is too low in order to prevent needle thread breakage and fabric damage.

BEFORE OPERATING

Threading

Open three covers.
Swing the presser foot aside.

Threading

Needle thread

Trim the knots off neatly before passing through the eye of the needle to rethread.

Knot the preset thread and the thread being used together to thread the machine.

②

Looper thread

Trim the knots off neatly after passing through the eye of the looper.

Threading diagram

Adjusting the presser foot pressure

Turn adjusting screw to adjust the presser foot pressure. It should be as light as possible, yet be sufficient to obtain the proper stitch formation.

Adjusting the diff. feed ratio

Loosen the nut and move the lever up and down to obtain the correct differential feed ratio.

Tighten the nut after positioning the lever as desired.

Adjusting the stitch length

1. While pressing the push button, turn the hand-wheel to seek the position at which the push button goes further into the depth.

2. Then, keeping the push button pressed, turn the handwheel and set the desired scale to the aligning mark.

Note: Stitch length adjustment must only be made after the differential feed ratio has been changed.

Adjusting the thread tension

Make tension adjustments with the needle thread knot ①, the upper looper knob ②, and the lower looper knob ③.

Cleaning the machine

Mainly the slots of the needle plate and the feed rows should be cleaned.

Replacing the needle

Check the needle carefully to see that the scarf is turned to the rear of the machine. Insert the needle to the proper depth, and fasten securely.

Be sure to use standard needle. Refer to ADJUSTMENT DIMENSIONS on the end of instructions.

The check of the filter fixs and replace

Turn off the power before checking filter and replacing. You'd better appeal for aid to a professional technical person.

If the filter is jammed by debris, oil circulation will be break off. For the sake of working order, please clean up the trash or change a new one each 6 months.

As shown on the right, fixed disassembly order of filter likes this:

1. Top cove
2. Screw
3. The cover of oil basin
4. Rubber ring
5. Filter
6. Check the filer , if the filter has been dilapidate, replace it.

Checking the oil circulation

Replacing the oil

Replace the oil one month after the first use and every six months thereafter.

Replacing the lower knife

To remove the lower knife

Temporarily screw ① after sliding the lower knife holder to the left.

Correct angles to resharpen the lower knife.

To replace the lower knife

Replacing the lower knife

Level of A = Level of B
Check cutting action of knives.
